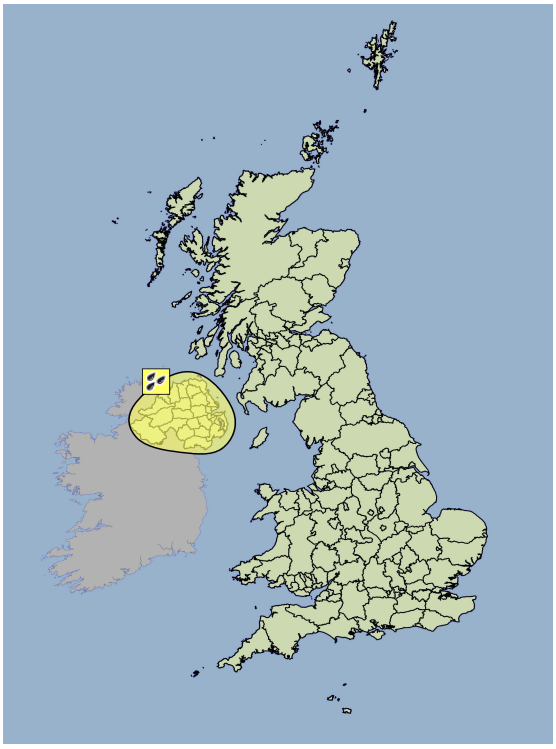
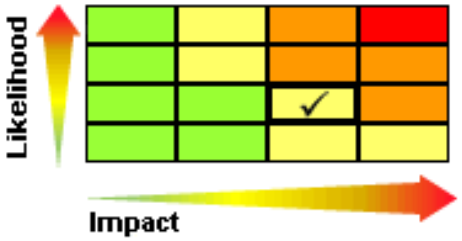
National Severe Weather Warning Service





Chief Forecasters Assessment
A complex frontal frontal system will continue to affect Northern Ireland with rainfall becoming heavy at times, although confidence remains low in the timing and exact location of the larger rainfall totals. Some places will only receive 5-10 mm of rain, whilst others could see as much as 40 mm, including isolated intense downpours of 10 mm within an hour.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **10:50 on Tue, 11th Nov 2014** until **08:00 on Wed, 12th Nov 2014**

Bands of rain, often heavy, will affect parts of Northern Ireland through the rest of today and overnight into Wednesday morning. Some heavy downpours are possible and the public should be aware of the risk of localised flooding.

This is an update to the warning issued on Monday, to expand the area westwards and also the period of validity.
